

Groww, for your first ₹100.

A redesign for India's 20–26 year-olds: the first paycheck, the stipend, the side gig, the pocket money. Goal-first, calm by default, built for lumpy income.

► Try the live app · siddham-jain.github.io/growwz

1 My take on the problem

Access is solved. Groww opens an account in minutes, and **56% of new NSE investors are under 30**. The problem is what happens *after*: a 22-year-old with lumpy income, a influencer feed and 1,000+ funds gets greeted by tickers, red/green P&L and F&O one tap away.

So they **freeze** (empty account) or **gamble**: SEBI found **91% of F&O traders lost money in FY25**. Both end in churn. The real job: **turn an anxious first-timer into someone with a habit, and get them through their first dip**. That's Groww's most valuable customer: joins at 22, stays 30 years.

Present bias → **goals first**

Lumpy income → **flexible**

Loss aversion → **calm UI**

Jargon shame → **decode it**

Dopamine apps → **reward habits**

Comparison → **%, never ₹**

2 In scope ✓

- Onboarding → starter plan → first ₹100 (KYC assumed done)
- Goal **Stashes**, with the fund picked from the time horizon
- Payday and %-of-payment splits, skip/pause, streak freezes
- Calm mode, Dip Coach, a neutral panic-sell check
- 60-second **Bytes** + tap-to-decode jargon
- F&O gate, capped **Spice pot**, Squads, dark mode

3 Out of scope ❌

- KYC**: already great on Groww
- Live data, payments, orders**: it's a prototype
- Loans/BNPL**: debt works against the goal
- Crypto**: unregulated in India
- F&O trading screens, paper trading**: only the gate
- Hinglish, advice**: next step / needs SEBI RIA

main character energy ✨

4 The solution: goal-first, calm-by-default Groww

🎯 Goals, not tickers

Name it ("Goa with the gang"). The horizon picks the fund; money needed within 2 years never touches equity.

💰 Fits lumpy money

Start at ₹100. Salary gets a one-tap payday split; gigs and pocket money get a % of each payment.

🧘 Calm by default

Goal progress, not daily P&L. Dips come with a coach and context, never a panic button.

📖 Learn in 60 sec

Story-style Bytes with one quick question. Every jargon word is tappable.

🔥 Friction only where it protects

F&O: SEBI's numbers, a 3-question check, one-time cool-off, a self-set loss limit. It still unlocks.

👯 Social, no flexing

Squads save for the same trip and share progress %, never rupees or targets.

Why this works: it targets the two biggest churn points, **the empty account** and **the first dip**, and the first win (₹100 invested, a celebration, week 1 of a streak) lands in **12 taps**.

CHOOSING YOUR FIRST INVESTMENT

- 👉 Scrolling 1,000 funds trying to find "the best one"
- 😓 Typing "MacBook fund" and letting the timeline pick

NIFTY -4% THIS WEEK

- 🐶🔥 Old me: "this is fine" (it was not fine, I sold)
- 🧘 Dip Coach: "your Goa money barely moved." Actually fine.

5/5

personas would start, up from 3/5 after round-1 fixes

Two rounds of persona walkthroughs (student, first-jobber, freelancer, burned F&O trader, plus an expert compliance review) drove 25+ fixes, like %-of-payment splits and projections shown only as ranges. Personas are synthetic, so they're directional; real 5-per-segment user tests come next. [Full evals →](#)
