

Groww, for your first ₹100

Redesigning Groww for India's 20–26 year-old, first-time investors

Live app: siddham-jain.github.io/growwz · **Full evals:** siddham-jain.github.io/growwz/evals.html

1. The problem

Access is solved: 56% of new NSE investors are under 30. What fails is what happens next. A first-timer with small, irregular income faces 1,000+ funds, daily P&L and one-tap F&O. They either **freeze** (empty account) or **gamble** (91% of F&O traders lost money in FY25, per SEBI). The job: **build a lasting habit and get them through their first market dip.**

2. In scope

- Onboarding to first ₹100 (KYC assumed done)
- Goal-based stashes with horizon-picked funds
- Flexible contributions for irregular income
- Calm mode and dip guidance
- In-context learning and jargon decoding
- F&O guardrails

3. Out of scope

- KYC (already strong)
- Live data, payments, order routing (prototype)
- Loans/BNPL (works against the goal)
- Crypto (unregulated)
- Personalised advice (needs SEBI RIA)
- Vernacular (next step)

4. Solution and why

- **Goals, not products.** Users name a goal; the time horizon picks the fund. Money needed within 2 years never goes into equity. *Why:* removes choice paralysis and unsuitable picks.
- **Fit irregular income.** ₹100 minimum, a one-tap payday split for salaries, a % of each payment for gig and pocket money, skip/pause anytime. *Why:* fixed SIPs bounce and feel like failure.
- **Calm by default.** Goal progress instead of daily P&L; context during dips. *Why:* the first red number is the biggest churn point.
- **Learn in place.** Every jargon term is tappable; 60-second lessons. *Why:* confusion makes people leave, not ask.
- **Friction only where it protects.** F&O gets loss data, a short readiness check, a one-time cool-off and a loss limit. *Why:* guard the riskiest path without blocking it.

5. How I tested it

Check	Result
Taps from opening the app to first ₹100 invested	12
Automated evals (journeys, suitability logic, copy, accessibility)	41 / 41 pass
Short-term money placed in equity, across every horizon × risk profile	0 cases
Unexplained jargon / serious WCAG AA issues	0 / 0
Synthetic personas who would start (round 1 → round 2)	3/5 → 5/5

Personas are synthetic and directional; real user tests are next. **Success metric:** % of new 20–26 users with 3+ contributions by day 90. **Assumptions:** KYC done, UPI AutoPay available, illustrative data.
